

CLINICAL CARDIOLOGY, ECHOCARDIOGRAPHY, IMAGING

Person-in-charge: *Gabriele Guardigli*

Location: *S. Anna Hospital*

Clinical Cardiology

7 senior hospital/university cardiologists

Echocardiography

3 senior experienced echocardiographers

Imaging

6 radiologists, and 2 cardiologists

This is the “heart” of the centre. It is the place where patients are admitted and cured. It is divided in “Intensive Care Unit” (7 beds) where acute patients are followed and the ward (22 beds) for the sub-acute ones. Both units have all the modern standard facilities to provide optimal cardiologic care, such as: transthoracic and transesophageal echocardiography (*including pharmacological and exercise echostress*), exercise testing, ECG Holter monitoring, latest generation CT Scans, magnetic resonance (MRI), and positron emission tomography (PET); the last three technologies in collaboration with Radiology. Both units actively participate to clinical research in tight connection with clinical research unit.
